## Mission

The Kelvin-class starship's primary purpose is deep space exploration beyond the frontiers of the Federation.

## Background

The Kelvin-class was a natural development following the Bonaventure-class starship. The success of the Bonaventure-class expanded the borders of the Federation at an unprecedented rate, necessitating a new class of starship to boldly go beyond those borders. While capable of defending itself, the Kelvin was designed primarily to evade conflict, doubtless due to heavy influence from the Vulcan Confederation of the late 22<sup>nd</sup>/early 23<sup>rd</sup> centuries.

## Features

The Kelvin features multiple phaser banks and several photon torpedo launchers, providing it with an adequate amount of firepower, particularly at close range.

Equipped with the latest deflector shield grid, the Kelvin can withstand attacks from even a Klingon battle cruiser. As a dedicated exploration vessel, the Kelvin possesses a powerful warp drive and some of the best sensors available to Starfleet. Similarly, the ship is equipped with a large number of shuttlecraft to assist in planetary survey missions where transporters would be either unfeasible or impractical. In extreme cases, the entire complement of the starship can be evacuated with its shuttles.
